EXPERIENCE

Deloitte

Invalid date — Present

Data Analytics Virtual Internship

- Collected and structured employee compensation data from various sources, supporting pay equality analysis across different roles and 5+ factories.
- Systematically cleaned and validated raw data, ensuring over 95% accuracy and consistency for reliable analysis and decision making.
- Identified patterns and differences in datasets, helping make smarter, data-backed decisions for key business areas.
- Developed clear Excel and Tableau reports, improving how data was presented to stakeholders by a measurable 20%.

EDUCATION

MSC in Computing Major Artificial Intelligence

Sept 2024 — Sept 2025

Dublin City University

Dublin, Ireland

Coursework: Relevant Coursework: Machine Learning, AI, Data Mining and Data Analytics, AI Information Seeking, Data Management, Statistical data analysis, Professional Research, Computer Vision.

Bachelor's degree in Computer Application (Distinction)

Aug 2020 — Aug 2023

KLE Society's RLSIBCA College

Coursework: Relevant Coursework: Data Structures, C++, Java, Python, Cloud Computing, Data Mining, Software Development Engineer, RDBMS, SDLC life cycle, OOP, Algorithms, Time/Space Complexity.

SKILLS

- **Programming & Databases:** Python, SQL
- **Technical Skills:** Data Cleaning, Data Validation, Data Preparation, Data Analysis, Pattern Identification, Data Quality Checks, Machine Learning, NLP, LLM Applications, Retrieval Augmented Generation (RAG), Embeddings, Model Evaluation, Scikit-learn, TensorFlow
- **Data & Reporting Tools:** Microsoft Excel, Power BI, Tableau, Streamlit
- **Cloud Platforms:** AWS, Microsoft Azure, Oracle
- **Soft Skills:** Attention to Detail, Analytical Thinking, Communication, Team Collaboration, Time Management, Problem Solving

PROJECTS

AI Regulatory Compliance Assistant (RAG + LLM)

- Designed a smart retrieval system for financial rules, making sure responses from large language models were always based on real documents.
- Put in place a system to automatically sort user questions into categories like AML and GDPR, making information retrieval 30% faster.
- Made a system that checked references for answers, ensuring solutions were directly from source documents and reducing untrue details by 90%.
- Developed methods for breaking down text and finding similar information, improving how precise and relevant search results were by 25%.
- Set up an easy-to-use web tool and confirmed it worked well with compliance questions, getting positive feedback from 80% of users.

Hate Speech Detection (Text + User Interactivity)

- Compared 5 machine learning models to identify hate speech from more than 200,000 tweets, using metrics like likes and retweets.
- Carefully cleaned and prepared data, also checking its quality to make sure metrics were correct, helping find trends in user behavior.
- Achieved 96% accuracy with Random Forest and 94% with BiLSTM for hate speech detection, showing different model strengths for the task.
- Shared project results to guide content moderation decisions, highlighting how data helps improve ethical standards and scalability for platforms.

Amazon Review Rating Prediction (ML & Deep Learning)

- Teamed up with 4 members under strict deadlines, working through complex ideas to help finish tasks effectively.
- Ran detailed analyses on big datasets, finding clear information that helped make better decisions informed by data.
- Shared project findings through easy-to-understand reports and presentations, making sure results were clear for everyone.
- Used NLP techniques with BiLSTM to correctly predict review ratings with 77.3% accuracy, solving problems and documenting steps.
